Dahua – Save footage from your CCTV using your Recorder

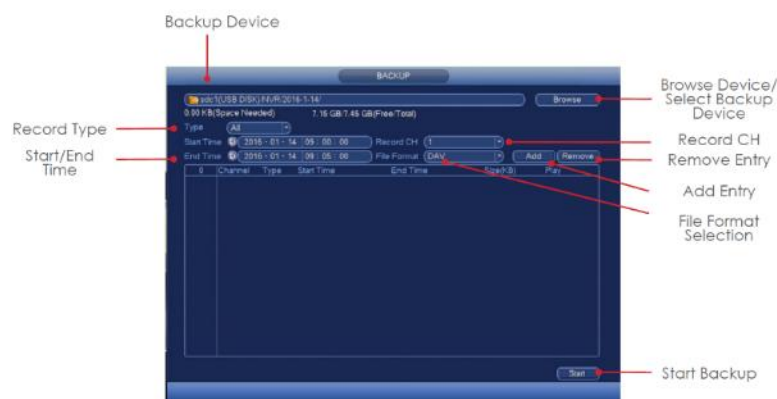

Open the Dahua software and type in your **Username** and **Password**. Click **OK** to log into the system.

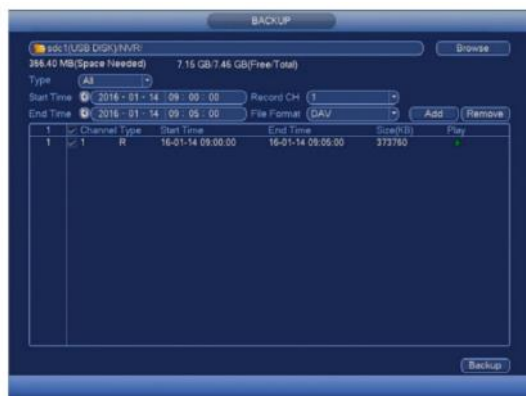

To access the backup menu on your recorder, you need to **insert a USB device** into the USB port of the recorder. A find USB device window will pop up on your screen. Select **File Backup**, a backup menu will now be displayed. Another way to do this is enter the **main menu** of the system and select the **backup** option.

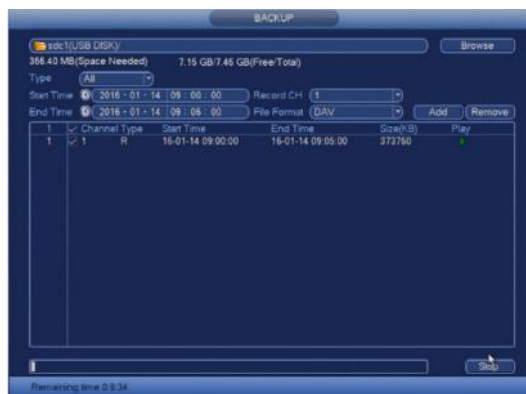

The Backup menu will now display, click the **Browse** button and **select the area** you wish to put the recording i.e. USB drive. Formatting a USB may be required, if so, click the Format button in the top right corner. Note: Formatting the USB device will delete all data on the device. Once the area/device has been selected click **save**.

Select the type of record using the **Type** dropdown box. Input the **start and end time** to which you wish to start and stop the backup. Select which camera(s) by clicking the **record CH** dropdown box. Click **File Format**, select the option **DAV**. Click the **Add** button to add as an entry.

Multiple entries can be created to back up recordings simultaneously. Click **Backup** to move to the next step. During the backup process a progress bar is displayed with an estimated completion time. Once the backup is finished a Backup Completed message will be displayed.

IF YOU REQUIRE ANY FURTHER ASSISTANCE WITH EXPORTING FOOTAGE, PLEASE CALL OUR TECHNICAL SUPPORT TEAM ON 0113 281 2106, WHO WILL BE ABLE TO TALK YOU THOUGH HOW TO EXPORT FOOTAGE FROM YOUR CCTV USING YOUR RECORDER.
